

# MetOcean Consultancy

## *On-Site Meteorologists*

For on-site assignments, a StormGeo forecaster with required certificates for working offshore can follow your operation over an extended period of time. A forecaster working on board your vessel or installation can provide expert, immediate decision support on operative windows, thus increasing efficiency.

Using an on-site meteorologist during weather-critical operations will increase the chance of rapid completion of the operation, and in some cases allow the customer to use less strict weather criteria.

### **MetOcean Consultancy Benefits:**

*A forecaster on board can:*

- Reduce the alpha factor for your operation
- Increase probability of finding suitable weather windows
- Increase the chance of rapid completion by reducing downtime
- Provide efficiency of operations
- Increase decision support
- Save valuable time and money

## MetOcean Consultancy

- Meteorologists are on duty 24/7/365 and accessible via telephone, online or on-site by assignment
- During an on-site assignment a forecaster will be dedicated to supporting your operation for a period of time, defined by you, regardless of geographical location
- Many of StormGeo's meteorologists hold offshore certificates and have a combined total of more than one thousand days of on-site offshore experience assisting in weather sensitive operations
- In an emergency situation, StormGeo can make forecasters and researchers immediately available to assist in situations such as oil spills, or limiting damages or disruptions due to adverse weather conditions
- StormGeo forecasters can also assist ship insurance brokers in limiting damages after natural disasters, relocating ships and making sure they stay out of the areas of damaging weather
