# Weather-related risks

*Be safer with accurate forecast information*

Weather-related risks present unique challenges for the financial services industry. Closing banks unnecessarily or too early can undermine profits and reputations. Failure to effectively plan for a major weather event may disrupt supply chains, put employees at risk, erode customer service and increase liability. With accurate forecast information, financial services organizations can effectively plan and prepare for severe weather events and maintain business continuity.

StormGeo Onshore solutions provide clients:

- Site-specific, 24/7 global weather forecasting and alerts
- Business continuity plans and support
- Hurricane, blizzard, flooding, lightning, and severe thunderstorm monitoring and alerts
- Employee resiliency solutions and training

StormGeo is a global provider of advanced analytics and meteorological services delivering decision support for weather sensitive operations. Since its inception StormGeo has analyzed petabytes of data, transforming it into actionable decision guidance to help our customers manage risk and operations, control costs and increase revenue. The company has a leading position in solutions for shipping, offshore oil and gas, renewable energy and corporate enterprise business continuity. StormGeo has 23 worldwide offices of which 7 are 24/7/365 operation centers spanning all geographical areas of the world. StormGeo is a ISO-9001 certified company.
