Supply Chain Logistics

Weather solutions for transportation management

Our industry-leading fleet weather system allows you to track your trucks and ships in real-time, rapidly understand weather impacts and take necessary action. Using our proprietary solution, you can calculate weather impedance, weather route delays and refined ETA prediction. These solutions can be utilized as part of our fleet weather system or consumed through APIs into customers' existing platforms.

- **Reduce Costs** - StormGeo's logistics solution does not just forecast the weather, it forecasts the state of the road, right down to snow, ice or flooding of a road network. This empowers truck drivers and operators to choose an optimal route to improve fuel efficiency. Similar efficiencies are attained through StormGeo's solutions for vessels at sea.
- **Provide Better ETAs** - Minimize delay penalties on late deliveries of trucks and ships by integrating StormGeo's weather impedance calculators into your routing schedules. Today, thousands of customers are using StormGeo to improve their forecast arrival times and mitigating weather-related routing delays.
- **Reduce Fleet Risk** - Reroute around severe weather by taking advantage of advanced alerting and specific routing advisories from StormGeo's network of 24/7 weather centers. The resulting efficiencies reduce risk to trucks, ships, cargo and crew.

Road Solution

- Drivers identify and manage transportation weather risk at a touch of a button with our easy-to-use platform.
- Road hazard alerts identify road weather risks, then generate map-based and audio alerts to help drivers and dispatchers choose the safest route.
- Before you get moving, know the predicted "state of the road" with street-level detail of local road conditions impacted by weather.

Mobile App

- Take us on the road! Our mobile app can be customized to your brand with flexible deployment options for both iOS and Android smartphones.
- Receive real-time road hazard alerts for the conditions that mean the most to drivers such as hydroplaning, low visibility and high winds.
- Dynamic routing allows you to incorporate delay risk to your route and quickly choose the routes that can save time and money.
- Driver compliant solutions are standard with audio alerts and one button touch access.
- Get real-time reporting of all locations back to operations and dispatch centers, fed directly into your fleet management software.

Ocean Solution

- StormGeo is the number one ship router in the world and actively routes over 6000 vessels monthly. Our customers receive live route advisories instructing Masters of their optimal sea route, accurate ETAs and provide operators with vessel performance monitoring.

"Since its inception, StormGeo has analyzed petabytes of data and transformed it into actionable decision guidance."
