

StormGeo Vortex

International Alerts

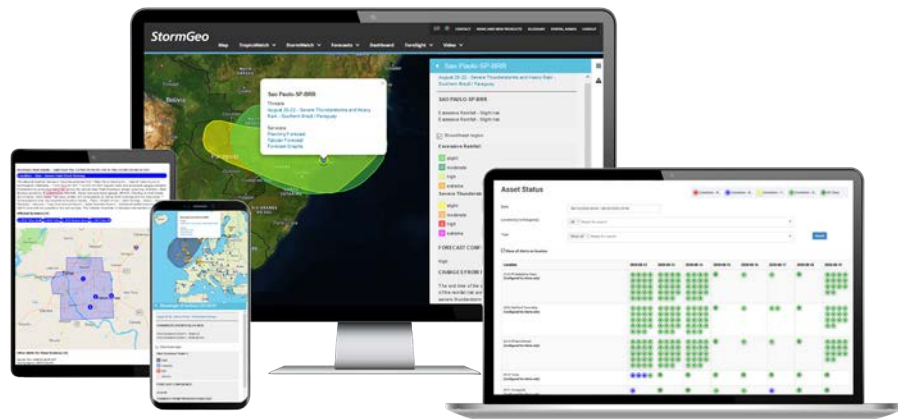

// Enhanced & Uniform Alerting For Your International Assets

International Alerts enhances StormGeo Vortex’s global weather analytics coverage with a single, consistent alerting system. International Alerts combines government issued alerts with StormGeo’s proprietary alerts and threats polygons for more than 40 countries, providing companies with global assets enhanced alerts and decision guidance.

Key Features and Benefits:

// **Single alerting system** for international assets for severe weather threats, including:

- Excessive rainfall and flooding risk
- High winds and max sustained gusts
- Ice accumulation and risk
- Severe thunderstorm risk
- Snow accumulation and risks

// **Historical review of alerts:** view all of the archived historical alerts for your assets based on a user defined time interval

// **Advanced alert delivery architecture:** Provides location level calibration of alert threat-type and severity color-coding, alert notification frequency, and alert email, text, and phone delivery mapping to ensure critical alerts reach the right people while eliminating unnecessary notifications.
